ELECTRODE FORMING METHOD

Examiner: Z. Best S.N. 10/525,202 Art Unit: 1795

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-7, drawn to an electrode forming method, classified in 310, subclass 363.

Group II, claims 8-12, drawn to a laminate, classified in 429, class 127.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I requires a metal salt solution and a reducing agent solution, which Group II does not require and is irrespective of final shape, and Group II requires a laminate having a thickness of 1 mm or more, which Group I does not require and an electrode layer, regardless of makeup.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
